Austin Hospital Emergency Department

Research Report 2006

Compiled by

A/Prof David Taylor
Director of Emergency Medicine Research
Foreword

Last year in this foreword, I mentioned the ‘lead time’ associated with the establishment of an academic emergency department (ED). This ‘lead time’ represents the period between the development of research study protocols and the publication of the findings. This can be considerable, often up to two years, even for the simplest of studies.

Well, in 2006 we began to see the rewards for our research activities. If publications and presentations are valued as academic ‘currency’ then our back account is looking very healthy. This year saw a considerable increase in research output as evidenced by 15 peer-reviewed publications and 23 research presentations or posters by members of our ED (see details below). These will, no doubt, raise the academic profile of our ED as well as that of Austin Health. Additionally, such activity is likely to further stimulate research interest, catalyse the development of even more activity, and attract high quality staff.

Our ED’s academic activities are not limited to publications and presentations. In 2006, a number of our staff were elected to important academic positions within their respective fields of interest. Notably, Dr Michael Yeoh has been appointed to the Scientific Committee of the Australasian College for Emergency Medicine and as Section Editor for *Emergency Medicine Australasia*. This is in addition to his work with the National Institute of Clinical Studies. Dr Simone Taylor now serves as a research supervisor to a number of candidates pursuing a Master’s Degree of Clinical Pharmacy and has been appointed to the national writer’s group for *Therapeutic Guidelines – Emergency Medicine*. These new positions are in addition to the contributions that other ED staff members make outside of our ED and help to substantiate our academic profile.

I believe our ED is poised to consolidate and expand its research activities considerably. The next 12 months will see some exciting opportunities eventuate. The planned move of the Victorian Poisons Information Centre to our ED will facilitate the collaboration that we began in 2005. We have established our ED as a centre for the training of Advanced Medical Science students and look forward to their involvement in ED research. We now have a research track record that can be used to strengthen applications for competitive research funding, including NHMRC project grants. Our research infrastructure still needs development and we are developing plans that include the establishment of a research assistant/nurse position. Finally, there is the possibility of Master’s and Doctoral programs and the establishment of an Emergency Medicine Research Fellowship.

I would like to congratulate the large number of our staff who have been successful in their research endeavours throughout 2006. I would also like to thank those staff who have assisted and facilitated this good work. Let’s all look forward to a great 2007.

**Ongoing Research Projects in the Emergency Department**

Teleconference support for junior medical staff working in a regional emergency department – an intervention trial  
- O’Callaghan C, Taylor DMcD, Braitberg G, Harrison J

Delayed versus immediate urethral catheterization following instillation of local anaesthetic gel in males: a randomized clinical trial  
- Garbutt B, Taylor D, Lee V,

The use of health smart cards by emergency department patients: perceptions of healthcare professionals and patients  
- Taylor D, Mohd Rosli R, Knott JC, MacBean CE, Das A

Emergency Department procedural sedation practices and factors associated with adverse events  
- Taylor DMcD, Millar R and the ED sedation study national collaborative

Quantitative assessment of tasks performed by interns and registrars in the Emergency Department during their clinical shifts  
- Weiland T, Sivagnanam T, Zhu JN, Dent A, Taylor DMcD.

Evaluation of Emergency Department Random Finger Prick Glucose testing as a screening tool for Type 2 Diabetes Mellitus.  
- Hewat N, Taylor D

The Australian Resuscitation in Sepsis Evaluation (ARISE) Study  
- The ANZICS Clinical Trials Group

The resource implications of vital signs monitoring in the Emergency Department  

Do triage descriptions bias wait-times & slow patient flow in Emergency Departments?  
- Dutch M, Taylor DMcD, Dent A.

Nature and Outcomes of Therapeutic Errors reported to the Victorian Poisons Information Centre – a prospective follow up study  
- Taylor D, Robinson J, Macleod D, Braitberg G, MacBean CE

The utility of chest Xray in patients with uncomplicated chest pain  
- Ng J, Taylor D

Paediatric Pain: Yes I truly can feel your pain, I think?  
- Rajasagaram D, Taylor D, Braitberg G, Peersall J, Otin B

Epidemiology of interpersonal assault in Victoria (1996-2004)  
- Coutts R, Taylor D
EMLA versus N2O for analgesia during intravenous cannulation of children in the emergency department: a randomised controlled trial
- Mann T, Taylor D, Smit De V

Paramedic cooling compared with hospital cooling after pre-hospital cardiac arrest: a randomised controlled trial
- The RICH Investigators

A comparison of lignocaine and bupivacaine use in the ED
- Taylor D, Shen JJ, Knott JC, MacBean C

Problems associated with patient handovers in the emergency department
- Taylor D, Ye K, Knott JC, Dent A, MacBean C.

The frequency and nature of complementary and alternative medicine usage among Emergency Department patients on warfarin
- Ghosh A, Taylor D, Taylor S, Haack L

Evaluation of ED medical, nursing and allied health staff attitudes towards the use of complementary medicines
- Taylor SE, Welch S, Barbour L, Ainsworth J.

An intervention to reduce the use of error prone prescribing abbreviations in the Emergency Department
- Taylor SE, Chu M, To P

Patient transfer from hospital to Aged Care facilities: Common medication problems and possible solutions.
- Taylor SE, Chu M, Tanner F

Comparison of two methods of providing patients with information about sublingual glyceryl trinitrate for acute relief of angina pain
- Taylor SE, Valoppi G, Sammut F, Antonopoulos J, Longhi T, Nomikoudis K

Medications Brought into the Emergency Department by Ambulance: Does This Impact on the Accuracy of Prescribing on Admission?
- Chan E, Taylor SE, Barger B, Marriott J

Snake Bite in Vietnam, a comprehensive review of the epidemiology of a fatal condition.
- Trinh KX, Quyen LK, Braitberg G, Winkel K.

Are Australian Emergency Departments adequately stocked with emergency antidotes and antivenoms?
